DataNomicsSM THE PLATFORM BUILT TO PUT IT ALL TOGETHER.

Think of all of the databases that are warehoused within your institution: They are like a pile of bricks, ready to be used to improve your business. DataPros will help you take those individual bricks and be the mortar to build real economic change through the integration of our business and your data.

DataPros created our platform by combining process, expertise, and data. The result is creative and iterative reporting unlike any other analytics. We work with you, shoulder to shoulder, as your data partner to build complex data relationships that deliver web-based reporting.

DELIVERING DATA AS A SERVICE (DAAS)

The DataNomics platform enables us to deliver Data as a Service (DaaS) solutions. A sister to Software as a Service (SaaS), where software is delivered via the Web, DaaS is a model where multiple data sources can be combined and delivered through an agnostic reporting tool in an easily digestible and customizable form. The DaaS model offers the following benefits:

- **Service Driven.** Goal definition around end-user discussion, education, and solution needs. Hands-on involvement with a partnership approach and total process transparency.
- **Adaptable.** Platform is flexible for change and conceptualized for broader use to streamline future reporting. Business rules clearly defined to ensure all stakeholder satisfaction.
- **Simple & Elegant.** Designed and built as building bricks; enables easy management, sculptable datasets, encouraging data discovery and creative reporting.
